IVGA CONNECT™ is the first universal solution allowing any outboard HD-SDI graphics systems to interact over the Tricasters IVGA network inputs. This revolutionary design allows the reuse of all of your graphic assets and facilitates a singular workflow that takes you all the way from the “A-Game”, to the streaming market.

IVGA CONNECT™ employs the host graphics systems HD-SDI full bandwidth key and fill outputs, which guarantees the highest quality IVGA conversion. In addition, since IVGA Connect uses the actual HD-SDI system output, all of the assets associated with scene are available over IVGA.

This means you get full “CLYP PLAYER” playback, as well as “ON FRAME-BUFFER TRANSITIONS”. It is true WYSIWYG, without limiting your production to partial active “RENDERER-ONLY” based scene playback.
